Programme Lead	Dr. Cristina Banks-Leite		
Student cohorts covered by specification	2023-24 entry		
Date of introduction of programme	October 15		
Date of programme specification/revision	August 23		

Programme Overview

A key feature of this programme is that over *70% of your time will be spent on a single research project*. Through the compulsory training weeks you also will gain hands on experience in a wide suite of methods and skills used in ecology and environmental sciences, including data collection and statistical analyses, biological computing and Geographic Information System (GIS). You will also discuss in depth issues related to global changes and policy, as well as biogeochemical cycles, and the science behind climate change.

Your skills training will be embedded in the context of a broad set of real-world ecological questions from ecosystems around the world to lab experiments. Some coursework items will contribute to real-world ecological projects, and you will have opportunity to be authors on formally published datasets.

You will be supported throughout the course by your peers, by research-active academics, Teaching Fellows, and Graduate Teaching Assistants. You will work in teams to develop and implement ecological projects. Our course is nested within the [Georgina Mace Centre for the Living Planet](#) that promotes interdisciplinary research and partnerships, bringing together natural scientists, engineers, mathematicians, medics, economists and social scientists.

There is a huge variety of topics (and supervisors) to choose from, and potential topics range from theoretical and mathematical, to computationally intensive, to field-based and practical, and combinations of these; from atmospheric physics to vegetation science; from curiosity-driven, fundamental research on ecosystem function, to policy-oriented analysis of ecosystem and water resources management.

Moreover, you are not confined to studying the topics that supervisors have suggested. You are free to discuss possible topics with potential supervisors, who will be more than happy to help you to design the right project for your interests and aspirations. Many Masters projects are carried out at Silwood with a supervisor from another Department, and this is a feature appreciated by staff and students alike – an opportunity to develop new collaborations and strengthen existing ones, and make new interdisciplinary science happen.

Another key feature of the course is its emphasis on wider relevance, and communication with a non-scientific audience. It's impossible to be seriously involved in ecosystem science, and especially the science of environmental change, without recognizing the human and policy dimensions of the subject and the importance of careful communication – for example, distinguishing policy-relevant scientific information (what science really 'says') from policy prescription. Recognizing that communication with a wider audience is a necessary and specialized skill, and that a broad understanding of the social and policy context is essential background for future practitioners and researchers, the eeChange Masters includes components designed to sharpen your faculties in these areas. There are group mini-projects to summarize information on various topics for a non-scientific audience, and a module in the social and policy context of environmental change.

Many alumni use this course as a stepping stone to a PhD, as the longer length of the research project enables a greater exploration of analyses and results, which may result in a scientific publication. However, others have moved on to work at NGOs, government agencies, research assistants and teaching.

Learning Outcomes

Upon successful completion of this module, you will be able to:

1. Justify an ecological question and/or hypothesis
2. Devise an appropriate research plan to address/test that question/hypothesis
3. Evaluate competing methods for collecting biodiversity data
4. Collect and/or generate data and analyse results in the field of ecology
5. Create scientific figures and maps
6. Implement data science techniques to better understand ecology, evolution and conservation
7. Interpret your project data and results in the context of published research in the field
8. Demonstrate independent critical thinking and broad knowledge of ecology
9. Communicate scientific results to stakeholders and policy managers
10. Communicate your independent project in both oral and written form

The Imperial Graduate Attributes are a set of core competencies which we expect students to achieve through completion of any Imperial College degree programme. The Graduate Attributes are available at: www.imperial.ac.uk/students/academic-support/graduate-attributes

Entry Requirements

Academic Requirement	2:1 Bachelor's degree in a science-based subject For further information on entry requirements, please go to www.imperial.ac.uk/study/apply/postgraduate-taught/entry-requirements/accepted-qualifications/
Non-academic Requirements	None
English Language Requirement	Standard requirement (PG) Please check for other Accepted English Qualifications
Admissions Test/Interview	None

The programme's competency standards documents can be found at: www.imperial.ac.uk/media/imperial-college/faculty-of-natural-sciences/department-of-life-sciences/public/postgraduate/masters/Life-Sciences-Competence-standards-PG.pdf

Learning & Teaching Approach

Learning and Teaching Delivery Methods

Teaching

You will be taught primarily through practical classes and fieldwork, supported by lectures, seminars, workshops, team-based learning and team-based problem-solving sessions. Teamwork will be in small groups of typically 3-6 people.

Independent learning

You will be expected to spend significant amounts of time working independently, outside of face-to-face contact time. This will typically include searching and reading the scientific literature, working on individual and group projects, and working on coursework assignments.

We will frequently use flipped teaching methods, meaning you will need to engage with online lecture materials, seminar recordings and readings in advance of attending timetabled sessions.

Research projects

You will spend over 70% of the programme working on an individual research project, during which you will be embedded in a real research environment either within Imperial College London or with external research and academic organisations.

Overall Workload

Your overall workload consists of face-to-face sessions and independent learning. While your actual contact hours may vary according to the optional modules you choose to study, the following gives an indication of how much time you will need to allocate to different activities at each level of the programme. At Imperial, each ECTS credit taken equates to an expected total study time of 25 hours. Therefore, the expected total study time is 2250 hours per year.

Typically, you will spend in the order of 10 % of your time on lectures, practicals, fieldwork and similar (around 350 hours), and in the order of 90 % of your time on independent study.

Assessment Strategy

Assessment Methods

You will be assessed in a variety of ways designed to test different skills. These will include:

Written assessment

1. POSTnote report

2. Science communication exercise
3. Research Project

Oral assessment

4. POSTnote presentation
5. Oral presentation
6. Project vivas

The programme allows you to test your understanding of the subject informally before you complete the formal summative assessments that count towards your final mark. These summative assessments allow you to demonstrate that you have met the intended learning outcomes for each module, and contribute towards your achievement of the programme learning outcomes. There is formal summative assessment linked to each module.

Balance of assessment

The percentages below are based on a typical pathway through the course.

	Year 1
Coursework	33 %
Research Project	40 %
Practical	7%
Oral examinations	20 %

Coursework comprises the POSTnote written report and presentation, and the science communication exercise. Research project includes mark on the dissertation given by two examiners. Practical refers to the mark given on lab performance by the supervisor. Oral presentation includes both presentation of research project and viva.

Academic Feedback Policy

You will be provided with feedback in a number of formats, including:

1. Oral (e.g. face to face during or after in-person or online sessions)
2. Personal (e.g. discussions with staff and teaching assistants)
3. Interactive (e.g. team based learning, peer-to-peer evaluation)
4. Written (e.g. comments on work, model answers)

The College's Policy on Academic Feedback and guidance on issuing provisional marks to students is available at:

www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Re-sit Policy

The College's Policy on Re-sits is available at: www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Mitigating Circumstances Policy

The College's Policy on Mitigating Circumstances is available at:

www.imperial.ac.uk/about/governance/academic-governance/academic-policy/exams-and-assessment/

Additional Programme Costs

This section should outline any additional costs relevant to this programme which are not included in students' tuition fees.

Description	Mandatory/Optional	Approximate cost
N/A	N/A	N/A

Important notice: The Programme Specifications are the result of a large curriculum and pedagogy reform implemented by the Department and supported by the Learning and Teaching Strategy of Imperial College London. The modules, structure and assessments presented in this Programme Specification are correct at time of publication but might change as a result of student and staff feedback and the introduction of new or innovative approaches to teaching and learning. You will be consulted and notified in a timely manner of any changes to this document.

Programme Structure ¹					
Year 1 - FHEQ Level 7 You will study all core and compulsory modules.					
Code	Module Title	Core/ Compulsory/ Elective	Group	Term	Credits
LIFE70028	Global Change and Policy	Compulsory		Autumn	15
LIFE70029	Core Skills	Compulsory		Autumn	15
LIFE70030	Research Project in Ecosystems and Environmental Change	Core		Spring-Summer	60
Credit Total					90

¹ **Core** modules are those which serve a fundamental role within the curriculum, and for which achievement of the credits for that module is essential for the achievement of the target award. Core modules must therefore be taken and passed in order to achieve that named award. **Compulsory** modules are those which are designated as necessary to be taken as part of the programme syllabus. Compulsory modules can be compensated. **Elective** modules are those which are in the same subject area as the field of study and are offered to students in order to offer an element of choice in the curriculum and from which students are able to select. Elective modules can be compensated.

Progression and Classification

Award and Classification for Postgraduate Students

Award of a Masters Degree (including MRes)

To qualify for the award of a postgraduate degree you must have:

1. accumulated credit to the value of no fewer than 90 credits at level 7 or above of which no more than 15 credits may be from credit level 6;
2. and no more than 15 credits as a Compensated Pass;
3. met any specific requirements for an award as outlined in the approved programme specification for that award.

Classification of Postgraduate Taught Awards

The College sets the class of Degree that may be awarded as follows:

1. Distinction: 70.00% or above.
2. Merit: 60.00% or above but less than 70.00%.
3. Pass: 50.00% or above but less than 60.00%.

Your classification will be determined through the Programme Overall Weighted Average and the designated dissertation or final major project module meeting the threshold for the relevant classification band.

Your degree algorithm provides an appropriate and reliable summary of your performance against the programme learning outcomes. It reflects the design, delivery, and structure of your programme without unduly over-emphasising particular aspects.

Supporting Information

The Programme Handbook is available from the department.

The Module Handbook is available from the department.

The College's entry requirements for postgraduate programmes can be found at:
www.imperial.ac.uk/study/pg/apply/requirements

The College's Quality & Enhancement Framework is available at:
www.imperial.ac.uk/registry/proceduresandregulations/qualityassurance

The College's Academic and Examination Regulations can be found at:
www.imperial.ac.uk/about/governance/academic-governance/regulations

Imperial College is an independent corporation whose legal status derives from a Royal Charter granted under Letters Patent in 1907. In 2007 a Supplemental Charter and Statutes was granted by HM Queen Elizabeth II. This Supplemental Charter, which came into force on the date of the College's Centenary, 8th July 2007, established the College as a University with the name and style of "The Imperial College of Science, Technology and Medicine".

Imperial College London is regulated by the Office for Students (OfS)
www.officeforstudents.org.uk/advice-and-guidance/the-register/

This document provides a definitive record of the main features of the programme and the learning outcomes that you may reasonably be expected to achieve and demonstrate if you take full advantage of the learning opportunities provided. This programme specification is primarily intended as a reference point for prospective and current students, academic and support staff involved in delivering the programme and enabling student development and achievement, for its assessment by internal and external examiners, and in subsequent monitoring and review.
